

Assumptions:

- Due to being highly unlikely, it is assumed that no two cities will hold a census on the exact same date, thus making *Census_date* a PK which will not result in repeating groups.
- Since the assignment spec tells us to create a “preliminary” conceptual model, I have not added the FLIGHT entity modifications that have resulted from the normalisation steps in task 2.
- It is assumed that each city must have 3 Tourist_attractions recorded only so that the database model will have a specific number of Tourist_attraction_# attributes – otherwise, the number of attributes would be indefinite.
- It is assumed that a country will have no more than 3 *principal* languages recorded so that the database model will have a specific number of Principle_language_# attributes – otherwise, the number of attributes would be indefinite.
